I build native Android features in Kotlin for OctoMobile, a mobile-banking application — including QR payments, card management, cardless transactions, and the receipts and feedback around them.

EXPERIENCE

Senior Android Developer · PT. Infosys Solusi Terpadu — 2021 – Present

UI and integration work in Kotlin with the VIPER architecture for the OctoMobile mobile-banking application.

- QR payments: QRIS and cross-border QR, merchant- and customer-presented flows, QRIS Tap and QRIS Transfer.
- QR receive-money, send-money and customer-presented QR generation, with receipts and summaries delivered through push notifications.
- Card management for debit and credit cards: block, activate and change PIN.
- Account detail screens for credit cards, savings and current accounts, and time deposits.
- Cardless withdrawal and deposit, including viewing active codes.
- Point transfers, virtual card numbers, and credit-card, loan and loan top-up application flows.
- Testing builds before final review to verify issue resolution, and taking part in code review.

Freelance Developer · Self-employed — 2020 – 2021

Web and mobile projects for clients, from requirements to delivery.

- Defined requirements and deliverables with clients and agreed fees and contracts.
- Implemented user-interface designs and new features for web and mobile applications.
- Optimized performance and debugged production issues to minimize disruption.
- Used client feedback to identify improvements.

Programming Instructor · CV. Dhuo Creative — 2019 – 2020

Taught Android and desktop programming to university and high-school students.

- Planned and delivered curriculum for more than 75 students.
- Designed classes, and prepared and graded examinations and assignments.

EDUCATION

Bachelor of Science

Universitas Pembangunan Pancabudi · 2020 – 2025

LANGUAGES

Indonesian · English
